

MILITEC LTD

SHOOTER DISPLAY STATION

The Shooter Display Station with the Precision Electronic Target Software is a ruggedized tablet display for the firing line shooter.

This system is designed to run the Precision Electronic Target Software and pairs perfectly with the H-bar LOMAH system for shooting in a portable package.

Can be used in a portable setting or fixed mounted at the firing line for standard use.

The Precision Electronic Target Software shows precise locations of hits and misses along with group size, score and center location.

All shot and group information can be displayed in inch, cm, MOA and MIL.

Notes can be saved for each shot group and sessions can be stored and later retrieved for further review and analysis.
